

Cutting-Edge HVACR Solutions

June 2022 Newsletter

What's New in June

MTI Launches New Website!

We launched a new website with a new domain recently and invite you to explore our new content and functionality: mtiowa.com

The site is still being updated, but you will find that it has new product photos, case studies, parts order forms, and more!

Let us know what you think and let us know what type of information you would like to see on our website! Reach out to Matt Grover at mattg@mtiowa.com.

**We serve the
commercial,
industrial, and
institutional
HVACR
industries.**

**HOW MAY WE
SERVE YOU?**

Direct-Fired Fixed Return (DFFR) Air Handlers Vs. Air Turnover Units (ATU)

For many years, Air Turnover Units (ATU) were the standard for commercial and industrial facilities. However, they have begun to phase-out in favor of **Direct-Fired Fixed Return Air Handlers (DFFR)**. DFFR units offer enhanced comfort and efficiency (**20% higher than ATU's**) along with lower operating costs.

An attractive option for customers looking to upgrade their indoor air quality and save money in the process.

PureAir Industrial VBS-302

PureAir manufactured an Industrial VBS-302 for Clearwater Paper in Clearwater, ID to prevent corrosion by purifying the air in the lab, which is also used as a Safe Haven in the event of a chemical spill. Because the unit needed to be installed in a tight space that also had a weight restriction, PureAir custom designed it to be 10 inches shorter and spread out the base to ensure it was under the maximum 40 pounds per square foot the room allowed. The unit was filled with 18 cubic feet of PP Blend and featured a Smart Panel to measure the room pressure and adjust the blower speed to dial in the exact target pressure.
